

## CORPORATE TREASURY & FX HEDGING POLICY - Q3

### 1. Entity Tax Liabilities:

- OmegaCorp: 10%
- SigmaLLC: 8%
- ApexCorp: 5% (EXCEPTION: ApexCorp 'Dividend' transactions are taxed at 15%)
- Divested\_Entity: 0% (Fully Tax Exempt) (*Note: Calculate Base USD Cost using the FX Rates workbook, then calculate Tax based on that Base USD. Subtotal = Base USD + Tax).*

**2. Cryptographic Overrides (Approval Tokens):** The Approval\_Token column contains valid hexadecimal strings representing Zlib-compressed bytes. You must first convert the hex string to bytes, then decompress using the standard Zlib library to extract the plaintext string.

- **Wholesale JPY:** If the transaction exceeds 10,000,000 JPY AND the decompressed token ends with the exact string "-WHS", use the JPY rate found in the 'Wholesale' sheet of the FX Rates workbook.
- **Executive Tax Exemption:** If the decompressed token starts with "EXEC-", you must cross-reference the Tax\_Exemption\_Registry.txt. If the specific ID is valid, the transaction is EXEMPT from all entity taxes (Tax = 0%).

**3. Aggregate Volume Rebate:** Group the transactions by their True Entity. Calculate the Total Base USD for each Entity. If an Entity's Total Base USD strictly exceeds \$1,000,000, apply a 5% volume rebate to the Subtotal (Base USD + Tax) of *every transaction belonging to that entity*. (Final Cost = Subtotal \* 0.95).
