

CORPORATE TREASURY & FX HEDGING POLICY - Q3

1. Base Exchange Rates:

- EUR = 1.10 USD
- JPY = 0.007 USD
- XDR (IMF Basket) = 1.35 USD
- USD = 1.00 USD

2. Entity Tax Liabilities:

- OmegaCorp: 10%
- SigmaLLC: 8%
- ApexCorp: 5% (EXCEPTION: ApexCorp 'Dividend' transactions are taxed at 15%)
- Divested_Entity: 0% (Fully Tax Exempt) (*Note: Calculate Base USD Cost, then calculate Tax based on that Base USD. Subtotal = Base USD + Tax.*)

3. Cryptographic Exemptions (Approval Tokens): The Approval_Token column contains valid hexadecimal strings representing Zlib-compressed bytes. You must first convert the hex string to bytes, then decompress using the standard Zlib library to extract the plaintext string.

- **Wholesale JPY:** If the transaction exceeds 10,000,000 JPY AND the decompressed token ends with the exact string "-WHS", use the Wholesale JPY rate of 0.006 USD instead of the standard rate.
- **Executive Tax Exemption:** If the decompressed token starts with "EXEC-", the transaction is EXEMPT from all entity taxes (Tax = 0%), overriding the standard liability table in Section 2.

4. Aggregate Volume Rebate: Group the transactions by their True Entity. Calculate the Total Base USD for each Entity. If an Entity's Total Base USD strictly exceeds \$1,000,000, apply a 5% volume rebate to the Subtotal (Base USD + Tax) of *every transaction belonging to that entity*. (Final Cost = Subtotal * 0.95).
