

Q1 RISK MANDATE

1. **Base USD:** Calculate by multiplying the Local_Amount by the Standard_FX rate in the Excel workbook.
2. **Stress Testing (Visual Rule):** Look at the Sector_Risk_Map.jpg. If a sector is designated as a **Red Triangle**, it is highly volatile. You MUST multiply its Base USD by the specific sector's "Stress Multiplier" found in the hidden sheet of the Excel workbook. If it is a **Green Square**, the multiplier is strictly 1.0. (This creates the 'Stressed USD' amount).
3. **Token Taxation:** Base64-decode the Auth_Token. Apply a flat tax on the Stressed USD amount based on the token tier: [LEVEL-1-BASIC] = 5% Tax. [LEVEL-2-ELEVATED] = 10% Tax. [LEVEL-3-SECURE] = 15% Tax. (Final Cost = Stressed USD + Tax).
