

Q3 FREIGHT LOGISTICS MANDATE

1. Base USD: Calculate by multiplying the Base_Weight_kg by the Base_Rate_USD_per_kg in the Excel workbook.
2. Surcharge Testing (Visual Rule): Look at the Route_Topology.jpg. If a route is designated as a Red Diamond, it is a high-risk zone. You MUST multiply its Base USD by the specific route's "Fuel Multiplier" found in the hidden sheet of the Excel workbook. If it is a Blue Circle, the route is standard, and the multiplier is strictly 1.0. (This creates the 'Gross USD' amount).
3. Customs Taxation: Base64-decode the Auth_Token. Apply a flat tax on the Gross USD amount based on the priority tier: [PRIORITY-LOW-CLEARED] = 5% Tax. [PRIORITY-MED-CLEARED] = 10% Tax. [PRIORITY-HIGH-OVERRIDE] = 20% Tax. (Pre-Penalty Cost = Gross USD + Tax).
